Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Applicant's election without traverse of species A (claims 3, 15, 27 and 34) in the reply filed on 12/12/05 is acknowledged.

Claims 16-18, 28 and 35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/12/05.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-15, 19, 20 and 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Yun et al (US 5,835,139) or Applicant's Prior Art Fig. 1 (APA Fig. 1).

Note APA Fig. 1 which identically discloses the claimed panel module, comprising a panel 20; a front frame 101; and a rear frame 102, connected to the front frame to position the panel therebetween, wherein the rear frame comprises a fastening portion 103 for a fastening device 30 to be mounted therein, and a part of the fastening portion is covered by the *sides* of the panel when the panel 20 is connected to the rear frame 102. As to claim 15, the limitation "formed by lancing and bending the rear frame " is a *product-by-process* limitation. This product-by-process limitation has not been given patentable weight in the product claim. It has been recognized that "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the

same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

Claims 25, 26, 29, 32, 33 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Yun et al (US 2002/0080299).

Note Figs. 4 and 5 which identically disclose the claimed flat panel display comprising a panel 20; a front frame (the front case), disposed in front of the panel; a receiving portion (the second support frame 40), disposed behind the panel; a peripheral portion, located at the periphery of the receiving portion; a connecting portion 42, having an arm and a connecting surface, the arm connecting to one of the receiving portion and the peripheral portion, the connecting surface connecting to the arm substantially extending to a back of the receiving portion; and a housing (the rear case 50), engaged with the panel by the connecting surface of the connecting portion via screw post 51 wherein a screw hole 41 is formed on the connecting surface for a screw 43 to be mounted therein, and the housing is fixed to the connecting portion (paragraphs 0011-0014).

Claims 1 and 7 are allowed over the prior art of record because none of the prior art discloses or suggests flat panel display comprising: a housing; a panel module having a front frame, a rear frame, and a panel, the front frame being assembled with the rear frame to encase the panel, the rear frame having at least one connecting portion, and a part of the connecting portion being covered by the panel; and a main

Art Unit: 2871

bracket, connecting the housing and the connecting portion of the rear frame. Claims 2-6 and 8-12 are also allowed since they depend on the allowed claims 1 and 7.

Claims 21, 27, 30, 31, 34, 37 and 38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 21, 27, 30, 31, 34, 37 and 38 are allowed over the prior art of record because none of the prior art discloses or suggests a panel module or flat panel display having structure as recited in claim 19, claim 25 or claim 32 *in combination* with the feature "wherein the fastening portion is extended from the peripheral portion for a predetermined distance and bent to the back of the receiving portion", "wherein the connecting portion is an L-shaped protrusion, and the connecting surface is positioned at a top of the L-shaped protrusion", or "a bracket, positioned between the connecting portion and the housing, and the connecting portion and housing respectively connected to the bracket at different locations".

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kim et al disclose a flat panel display having a part of the connecting portion being covered by the panel.
